

STERILE AIR IN ANY TYPE OF ROOM

The coronavirus not only spreads through direct and indirect contact, it can also remain in suspension in the air we breathe. Interior spaces are full of microscopically small aerosols that carry viruses, bacteria, pollen and odours. Aerosols that you and your visitors, employees or patients could easily inhale. Even good ventilation is not enough to prevent the airborne spread of viruses, pollen and bacteria.

Air purification is an effective additional measure alongside ventilation. The mobile air purifier from RECO uses a unique combination of four purification techniques to produce truly healthy, clean and fresh air!

- 1 Healthy, clean and fresh air
- 2 Ultra low-noise
- 3 Energy-efficient
- 4 Odourless
- 5 User-friendly
- 6 Mobile

PURIFIES THE AIR IN SPACES UP TO 400 M³

Voltage
230 V
(15-48 W)

Noise level
Max. 42 dB

Dimensions
340 x 340 x 1700 mm

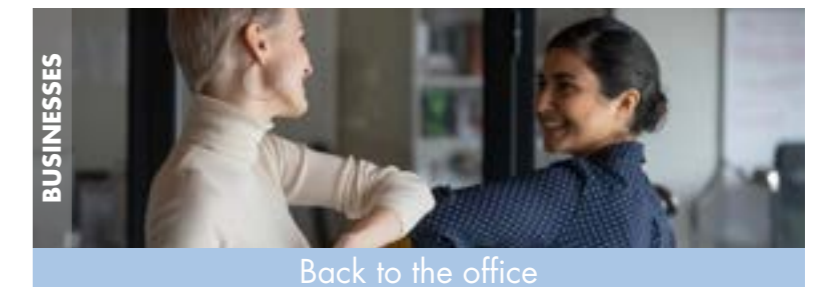

Weight
40 kg

Material
Metal, black coated

Purification technique
Ionized Plasmafilter

HEALTHY INDOOR LIVING PRESENT & FUTURE

With the advent of Coronavirus, the quality of indoor air is under a magnifying glass. Many illnesses are spread by tiny pathogens in the air such as bacteria, fungi or viruses. We may also be living with the threat of multiple variants of Coronavirus for many years to come. In most cases an airborne disease is contracted when someone breathes in infected air, which can then spread to other people through their breath when they cough or sneeze. Airborne diseases are common and can have mild or in some cases severe symptoms. Due to the Plasma filter technology contained in our air purifier, the aerosol pressure is reduced to an almost sterile level in any desired room. **This way we keep your spaces healthy for today and long into the future!**

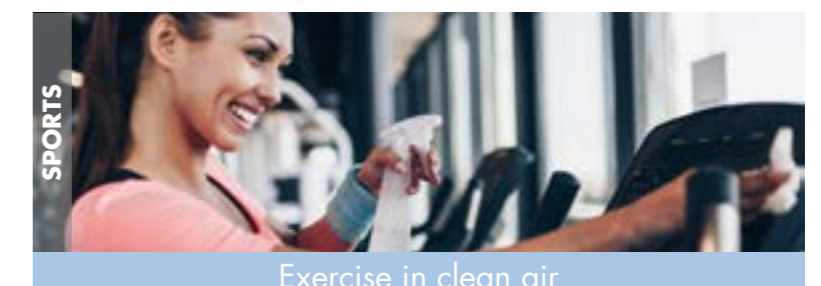

Back to the office

Exercise in clean air

FOUR ADVANTAGES OF RECO

RECO offers more than just equipment. We monitor your air quality, give you specific advice based on your room types and regularly visit you to carry out maintenance. Air quality measurement, transport, installation and maintenance are all included.

Air quality measurement

Free test

Advice for your situation

Free service

The RECO Air Sensor

REQUEST A FREE TEST

Experience how effective the RECO Air Purifier and sensor are during a one-week test. We measured the air quality in your room beforehand, and then discuss the results at the end of the test. All completely free-of-charge.

UNITED AGAINST THE CORONAVIRUS, WITH RECO AIR PURIFICATION

In addition to the standard COVID-19 measures of maintaining a distance of 2 metres and disinfecting thoroughly, **virus-free air** is also a key element in the fight against the virus. We achieve this by offering a plug&clean solution for - the RECO Air Purifier. The technology built into our air purifier reduces the viral load in the aerosols to a near-sterile level in all types of room!

PlasmaFilter VS HEPA filter

- Viruses are **neutralised** instead of captured
- Requires less power, which means less **energy consumption** and **noise pollution**
- **Low maintenance** because a plasmafilter has to be replaced once every 4 years on average.
